Summary

Backend Engineer with **2 years of experience** building production **AI-powered banking platforms** in **Go** and **Python**. Delivered a multi-tenant **RAG** system and **260+ REST endpoints** on GCP, alongside reusable Go microservices adopted across **2 engineering teams**. Experienced in **PostgreSQL (RLS, pgvector)**, distributed systems, and enterprise authorization frameworks including **RBAC** and **SSO**.

Education

Dayananda Sagar College of Engineering

Bachelor of Engineering in Industrial Engineering & management (GPA: 8.01 / 10)

Graduated Aug 2024

Bangalore, Karnataka

Experience

VaidhyaMegha Private Limited

Software Developer

Jul 2024 - Present

Hyderabad, India

- Engineered the core backend for **QORRO**, a multi-tenant AI banking platform comprising **260+ REST endpoints** across **67 service modules** on FastAPI and PostgreSQL.
- Built recommendation and offer-matching services on a pluggable scoring framework integrating **3 ML models** (attrition, deposit-growth, and personal-loan propensity).
- Designed and deployed a production **RAG** system using OpenAI embeddings, PostgreSQL full-text search, and **pgvector** hybrid retrieval for regulatory and policy search.
- Implemented tenant isolation using **48+ PostgreSQL RLS policies**, RBAC, step-up authentication, and Azure AD / GCP Identity Platform SSO.
- Developed reusable **Go microservices** adopted across **2 engineering teams**, and managed deployments using Docker, GitHub Actions, Cloud Run, and **35 Alembic migrations**.

Projects

QORRO — Enterprise AI Banking Platform FastAPI, PostgreSQL, pgvector, GCP, OpenAI, Azure AD SSO, Salesforce Canvas

- Engineered a recommendation pipeline combining customer facts, contextual signals, business rules, and **3 ML scoring models** (attrition, deposit-growth, and personal-loan propensity) to generate actionable banker recommendations.
- Built a **RAG** knowledge base over regulatory and policy documents using OpenAI embeddings, **pgvector**, and PostgreSQL full-text hybrid retrieval for natural-language search.
- Built the **Dynamic Contextual Conversation Guide (DCCG)**, combining customer profiles, transaction history, and recommendation signals into real-time personalized banker talking points surfaced through Salesforce Canvas.
- Delivered a multi-tenant backend comprising **260+ REST endpoints** across **67 service modules**, with per-bank database provisioning, **48+ PostgreSQL RLS policies**, RBAC, and Azure AD / GCP Identity Platform SSO.

Service-Gateway Platform

Go (Service Weaver), PostgreSQL, AWS S3, Redis, Docker

- Authored a reusable Go framework standardizing authentication, file management, and inter-service messaging, adopted across **2 engineering teams**.
- Built distributed services including AWS S3 presigned-URL file sharing, Redis messaging, OTP delivery, and Razorpay payment integrations consumed as shared infrastructure components.
- Accelerated backend service development through reusable infrastructure components and standardized architecture patterns.

Dealer Management Platform

Spring Boot, TypeScript, PostgreSQL, Razorpay, Azure

- Built backend services supporting vehicle ordering, payment processing, refunds, and role-based business workflows.
- Integrated Razorpay payment systems with transaction tracking, reconciliation support, and audit logging.
- Designed secure REST APIs and authorization models for reliable and traceable transaction workflows.

Technical Skills

Languages: Go | Python | TypeScript | Java | SQL | C++

Backend & Architecture: Distributed Systems | Microservices | Multi-Tenancy | RBAC | JWT | SSO | PostgreSQL

AI & Search: RAG | LLM Integration | OpenAI APIs | Embeddings | pgvector | Hybrid & Semantic Search

Frameworks & Tools: FastAPI | Gin | Spring Boot | SQLAlchemy | Alembic | Docker | Kubernetes | GitHub Actions

Cloud & Data: GCP (Cloud Run, Cloud SQL, GCS) | AWS (S3) | Azure | PostgreSQL | asyncpg | Pydantic | Redis
